

## Redwood Analytics Selects Cizer.Net Reporting to Deliver B.I.-Reporting to Legal Firms Worldwide

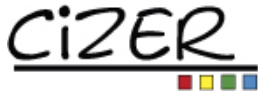

**Ashburn, VA - Sept 14, 2006--** Cizer Software, a leading developer of web-based reporting software, announced an Independent Software Vendor (ISV) partnership with Redwood Analytics to deliver Business Intelligence (BI) Reporting to legal firms worldwide. This agreement adds an important vertical audience to Cizer.Net Reporting's installed user base as it continues to gain world-wide momentum.

"We're very pleased that Redwood Analytics has selected Cizer.Net as their tool of choice for reporting to be bundled with their Business Intelligence product line for law firms," stated Cizer CEO Caitlyn Harts. "Having worked with Redwood for several years, first as a client and then as a reseller partner, we're impressed with the quality of the Redwood team and the solution which they offer their customers. Cizer is proud to be part of this excellent software offering."

Redwood Analytics COO and CIO, Dan Pomerantz, said "We're very excited about the ISV partnership with Cizer and its ability to integrate such a key product into our performance suite. Cizer has been extremely helpful and easy to work with in helping us achieve this integration. Business Intelligence, as defined by the Gartner Group, is a combination of both analytics and reporting. Thanks to our ISV partnership with Cizer, reporting as a component of Redwood's integrated BI solution is now a reality."

By integrating the powerful web-reporting and BI provided by the Cizer.Net Reporting tool with their existing application, Redwood Analytics will be able to provide a robust, end-to-end, Business Intelligence & Enterprise Reporting solution to their legal industry clients – delivering new and unique competitive advantages to their customers, such as:

- High adoption user interface that enables every user to get insight out of their data, not just highly trained analysts and professional "data explorers."
- Ability to leverage existing IT infrastructure, instead of imposing new data and server requirements.
- Deployments in days or weeks, instead of months or years as required with competitive solutions.
- Low cost of ownership for initial software purchase and ongoing service and support.

### **About Redwood Analytics**

Redwood Analytics, the leading provider of applied business intelligence to the legal industry, helps law firms analyze, report upon, and distribute information to improve strategic-decision making by the partnership and administration. Redwood's software provides immediate returns upon deployment and is sophisticated enough to grow with their customers' needs. Redwood has developed best practices for financial management, and their analytic tools provide a fresh understanding of the key drivers underlying law firms' business performance. Redwood is widely acknowledged for the ability to design flexible solutions and meet and anticipate client needs in customer service, R & D, and knowledge transfer. ### **About Cizer Software**

Cizer Software, the leading vendor of pure web-based reporting for SQL Server Microsoft Reporting Services, has delivered database reporting solutions and expertise since 1983, citing many large government and commercial organizations among their customer base. The Cizer.Net Reporting Suite provides an unprecedented value for Business Intelligence running on the Microsoft platform. With the release of CNR 4.0 in August 2006, Cizer introduces its Enterprise Edition of CNR, with the power to scale across large enterprises, serving as a front-end to large data warehouses. Both CNR Standard and CNR Enterprise remain pure browser, zero client footprint products, requiring nothing on the client user machine except Internet Explorer 6.0 or higher.
